

The Top 10 Benefits of Dental Implants

When it comes to replacing teeth that are missing or damaged, you have several options. However, one option stands out above the rest is dental implants. Dental implants offer benefits that other tooth replacement options, like dentures or bridges, just can't offer. Here are the top benefits of this innovative option:

1. Prevents Bone Loss

When you lose teeth, you also tend to lose bone mass in your jaw. Your jawbone needs the stimulation it gets when your teeth connect to maintain its mass. Dental implants are the only tooth replacement option that also replaces that jaw bone stimulation, helping to prevent bone loss.

2. Matches Your Natural Teeth

Dental implants come in a wide variety of shapes and sizes. Your dentist will work with you to design implants that match the color of your surrounding teeth and fit perfectly in the gap. No one but you and your dentist will know which teeth are implants.

3. Restores Bite Force

Because dental implants are anchored into your jaw with a titanium post that replaces the tooth root, they allow you to bite with more or less the same amount of force you could use with your natural teeth. Other tooth replacement options do not restore nearly as much of your bite force because they sit on top of the gums and aren't anchored in place.

4. Prevents Changes In the Shape Of Your Face

Your teeth help support your facial structure. When you lose teeth, you lose that support, which eventually causes your face to change shape, making you appear older. Dental implants provide similar support for your face as your natural teeth, preventing it from changing shape.

5. Enables Natural Speech

Some tooth replacement options, like dentures, can impact your ability to pronounce words correctly. Missing teeth can also alter your speech. Because dental implants feel and function just like natural teeth, they enable you to speak easily and naturally.

6. Won't Get Cavities

Artificial teeth still need to be cared for to prevent bacteria from building up in your mouth and causing infections, but the material that dental implants are made of can't decay. You'll never have to worry about getting cavities in your dental implants!

7. Easy To Care For

Dental implants don't require you to buy any special products to clean or care for them. There's no need for cups, cleansing tablets, adhesive, or special flossers. You just brush and floss, just the way you would with your natural teeth.

8. No Embarrassing Slippage

Patients with dentures sometimes feel self-conscious about speaking, laughing, or eating in public, as dentures can visibly shift or slip inside your mouth. Dental implants are firmly anchored in place and will never embarrass you.

9. Supports Adjacent Teeth

A gap in your mouth caused by a missing tooth can cause the teeth on either side of the gap to shift positions, leading to misalignment. Dental implants fill the gap, allowing you to maintain a straight, even smile.

10. A Permanent Solution to Tooth Loss

Other tooth replacement options will need to be repaired or replaced periodically, but dental implants are designed to last for the rest of your life. If you're in need of a tooth replacement option, you should definitely consider dental implants. To find out if you're a good candidate for dental implants, [schedule a consultation by calling 617-969-8558](tel:617-969-8558).
